Ultrasound Whole Abdomen

Approved On: 18-May-26 12:19

ULTRASOUND WHOLE ABDOMEN

Clinical details: History of left flank pain.

Findings:

Liver is normal in size (~14.0 cm), outline and echotexture. No focal lesion is seen. Intra hepatic biliary radicals are normal. Portal vein is normal in course and caliber.

Gall bladder is distended. Wall thickness is normal. No obvious gallstones seen. Common bile duct is not dilated.

Pancreas is partially-visualized at the time of scan (partially obscured due to overlying bowel gas), grossly unremarkable.

Retroperitoneum is partially obscured by overlying bowel gases, grossly unremarkable.

Spleen is normal in size (~9.2 cm) and echotexture. No focal lesion is seen.

Right kidney is normal in size (~10.0 x 3.9 cm), outline and echogenicity. Corticomedullary differentiation is maintained. No evidence of calculus or hydronephrotic changes seen.

Left kidney is normal in size (~9.2 x 4.5 cm). **Cortical echogenicity is increased. Corticomedullary differentiation is partially effaced. Grade-I/II hydroureteronephrosis is seen. Evidence of a small calculus is noted impacted in the juxta vesical segment of left lower ureter, measuring upto ~5.0 mm.**

Urinary bladder is seen in well-distended state. *Few small subtle intra-luminal mobiles echoes are seen in the urinary bladder (s/o urinary bladder sediments).* No calculus or mass lesion is seen.

Prostate is normal in size (vol: ~9.4 cc), outline and echogenicity. No focal lesion is seen.

No free fluid is seen in the peritoneal cavity.

IMPRESSION: ULTRASOUND WHOLE ABDOMEN REVEALS:

- **Left grade-I/II hydroureteronephrosis, secondary to an obstructive left lower ureteric calculus, as described.**
- **Associated left grade-I/II post obstructive nephropathy.**
- **Minimal cystitis. Advise - Urine R/M correlation.**
- **Rest of the scan is unremarkable.**

Please correlate clinically.

Note: CT KUB is the modality of choice for evaluation of renal / ureteric calculi.
